

enummi™ Body Products

Intensive Body Lotion and Lite Body Lotion

Nutrition for your skin

You exercise to get your heart pumping. You eat plenty of fiber to keep your digestive system moving. What are you doing to keep your skin glowing?

Healthy, beautiful skin takes the same care and nourishment you give the rest of your body. The skin is the body's largest organ and a critical component of the immune system. Taking care of your skin is an important part of looking and feeling great!

Our enummi Body products give your skin the royal treatment, with immune system support and all-over-moisturizing for your skin. They include the power of our Transfer Factor E-XF™ blend to support the immune system. Both lotions also include herbs and protective antioxidants to nourish the skin and help maintain its natural resiliency. Pick either Intensive Body Lotion with rich, moisturizing ingredients, or Lite Body Lotion, formulated specifically for humid climates.

Key Points

- **Transfer Factor E-XF:** One of the strongest forces in nature, transfer factors have taken their place in the forefront of nutritional science. Transfer factors are tiny molecules that transfer immunity information from one entity to another, such as between a mother and her breastfeeding infant.

The enummi Body products include Transfer Factor E-XF to help educate, train, and support your skin's healthy immune response for phenomenal protection.

- **White Tea:** Rare white tea is made from buds and young leaves that are simply dried and not as processed as green or black teas, so more of its antioxidant properties are preserved. In fact, some research suggests that the benefits of white tea may be as much as three times more powerful than green tea. White tea offers protective benefits that help fight naturally-occurring free radicals in the body, which cause damage to the skin. It supports healthy cellular function and promotes the natural renewal process for skin health and appearance.
- **Moringa:** Providing a powerhouse of nutritional value, Moringa has become a favorite in holistic personal care products. The Moringa plant has a complex range of naturally occurring vitamins, minerals, amino acids (including all of the essentials), and other important phytonutrients.
- **Natural Moisturizers:** Aloe vera and shea butter are infused with essential moisture and soothing properties for softer, healthier skin.

Did you know?

- The skin protects, absorbs, and eliminates. It provides a first line of defense for the body and functions as one of the body's largest eliminative organs. When skin functions properly it provides daily protection from harsh environmental exposure and helps eliminate toxins from the body.
- The skin often mirrors the health of the whole body. In addition to caring for your skin on the outside, good health through proper nutrition and supplementation will be reflected in the appearance of your skin.

Technical Points

- The extraction process for transfer factors from chicken egg yolks is protected by U.S. patent 6,468,534; exclusive manufacturing techniques for extracting transfer factors from cow colostrum and chicken egg yolks are protected by U.S. patent 6,866,868.
- The two most abundant and safest sources of transfer factors are cow colostrum and egg yolks. Transfer factor molecules can be shared safely and effectively. Whether they are transferred from cow to human or from chicken to human, transfer factors are not species-specific.
